# Aim of the project

TopQuark  
Meeting

Michael Maes

Introduction

Jet Resolution

$p_T$ -resolution  
Bugs?

TopMass

Mass resolution  
Top Counts

- Compare Calorimetry Jets (CaloJets) and Particle Flow Jets (PFJets)
- First stage: compare them by the jet resolutions.
- Second stage: use both Jet types to construct  $m_{Top}$  and compare their performance<sup>1</sup> in this context.

---

<sup>1</sup>Mass resolution, bias

# Sample and matching description

Jet Resolution

$p_T$ -resolution  
Bugs?

TopMass

Mass resolution  
Top Counts

- TauolaTTBar\_Summer08\_IDEAL\_V9\_v1 REDIGI in CMSSW\_2\_2\_3. (Skimmed for FULL-HADRONIC events)
- PFJets and CaloJets are matched to a GenJet (without  $\nu$ ) via  $\Delta R < 0.3$
- Only when the GenJet gets a PFJet AND a CaloJet matched the three are used in the analysis.
- I applied a  $p_T$ -cut on the CaloJets and PFJets of 20GeV. This cut is applied after the matched jets are L2L3 corrected.
- All b-jets containing a global muon are rejected. This case will be treated separately.

# Jet corrections

TopQuark Meeting

- CaloJets and PFJets are corrected with L2L3Summer08 redigi corrections.

# Jet corrections

TopQuark Meeting

- L5 and L7 corrections are not applied because they are not needed for PFJets and L5 corrections even deteriorate PFJets.

Top Counts

- This plot was made by just calculating RMS and mean in each bin of  $E^{GenJet}/Quark$ .
- Not really conclusive.

# Using a gaussian fit

TopQuark Meeting

Michael Maes

Introduction

Jet Resolution

$p_T$ -resolution  
Bugs?

TopMass

Mass resolution  
Top Counts

- Some definitions:

- Jet  $p_T$ -resolution:  $\sigma$  of  $\frac{p_T^{rec} - p_T^{gen}}{p_T^{gen}}$  (gaussian fit)

- Jet  $p_T$ -response: mean of  $\frac{p_T^{rec} - p_T^{gen}}{p_T^{gen}}$  (gaussian fit)

- Two fits were performed: Full range (-1 to 1 and 20 bins around maximum bin). Results are similar!

Figure:  $p_T$ -resolution VS  $\eta$

- The eta-dependence is not symmetric (not even for uncorrected jets).

# $\eta$ Asymmetry

TopQuark  
Meeting

Michael Maes

Introduction

Jet Resolution

$p_T$ -resolution  
Bugs?

TopMass

Mass resolution  
Top Counts

- The asymmetry is not dependent on the level of correction. To check this I drew a first plot (shown on next slide) for different correction levels + uncorrected jets. In this plot I flipped the points on the negative side of  $\eta$  to positive  $\eta$ , labeling them  $\eta^+$  and  $\eta^-$ . Then I took the difference between the two.
- For CaloJets it is clear that there is no asymmetry, but for PFJets there is.

# TopMass Reconstruction

TopQuark  
Meeting

Michael Maes

Introduction

Jet Resolution

$p_T$ -resolution  
Bugs?

TopMass

Mass resolution  
Top Counts

- $m_{Top}$  is reconstructed using only the 6-jets final state of the  $t\bar{t}$ .
- Here the previous matching is applied. Only events are used where 3 jets for  $t/\bar{t}$  (or both) are matched to one CaloJet and one PFJet.
- A cut on the jet- $p_T$  of 20GeV was applied after L2L3 Corrections.
